

gdotv

The All-in-One Graph Client & IDE

gdotv helps developers get more done with graph technology. Whether your team is using a graph database, an RDF triplestore, or a graph query engine, gdotv amps up your productivity in every graph task.

Visualize Your Data

View your data in a variety of graph and non-graph formats across tens of thousands of elements without compromising usability. Customize your visualization with colors, labels, shapes, and layouts.

Write & Debug Your Graph Queries

Compose your graph queries in no time with smart autocomplete and suggestions. And use G.V.I.'s debugging tools to detect problems fast.

Explore & Edit Graph Data on the Fly

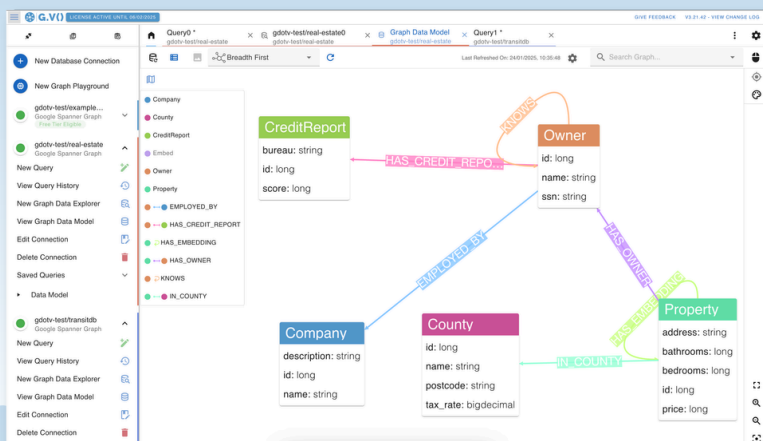

Navigate your graph with the option to dynamically search, select, or filter elements. Add, update, and delete nodes and edges in real time with just a click.

Track Your Data Model Automatically

Keep your team in sync as your data model evolves over time with a convenient graph visualization format that maps your graph data schema in one place.

Manage Your Graph Database with Ease

Deploy on your desktop or in the private cloud in minutes. Manage all your connections in one place with support for high-security environments.

Every Graph Database, Every Query Language

Try out gdotv for yourself in <5 minutes from download to first graph visualization:
